

Geosphere is an online-only journal that targets an international audience and publishes high-quality research results from all fields of the geosciences. It particularly seeks papers that take advantage of the electronic format.

JUNE 2009 • V. 5 • NO. 3

- 152 Transition from subduction to arc-continent collision: Geologic and neotectonic evolution of Savu Island, Indonesia**
Ron Harris, Michael W. Vorkink, Carolus Prasetyadi, Elizabeth Zobell, Nova Roosmawati, and Marjorie Aporhorpe
Research Paper, Tectonics
- 172 Reconstructing late Cenozoic deformation in central Panamint Valley, California: Evolution of slip partitioning in the Walker Lane**
Joseph E. Andrew and J. Douglas Walker
Research Paper, Tectonics
- 199 Active structures of the Himalayan-Tibetan orogen and their relationships to earthquake distribution, contemporary strain field, and Cenozoic volcanism**
Michael Taylor and An Yin
Research Paper, Tectonophysics
- 215 Growth, behavior, and textural sector zoning of biotite porphyroblasts during regional metamorphism and the implications for interpretation of inclusion trails: Insights from the Pequop Mountains and Wood Hills, Nevada, USA**
Phyllis A. Camilleri
Research Paper, Structural Geology
- 252 Fault interaction and along-strike variation in throw in the Pajarito fault system, Rio Grande rift, New Mexico**
Claudia J. Lewis, Jamie N. Gardner, Emily S. Schultz-Fellenz, Alexis Lavine, Steven L. Reneau, and Susan Olig
Research Paper, Structural Geology
- 270 Determining relative magma and host rock xenolith rheology during magmatic fabric formation in plutons: Examples from the middle and upper crust**
Aaron S. Yoshinobu, Jeannette M. Wolak, Scott R. Paterson, Geoffrey S. Pignotta, and Heather S. Anderson
Research Paper, Structural Geology
- 286 Growth and zoning of the Hortavær intrusive complex, a layered alkaline pluton in the Norwegian Caledonides**
Calvin G. Barnes, Tore Prestvik, Yujia Li, Lindy McCulloch, Aaron S. Yoshinobu, and Carol D. Frost
Research Paper, Petrology—Igneous
- 302 Seafloor-hydrothermal Si-Fe-Mn exhalites in the Pecos greenstone belt, New Mexico, and the redox state of ca. 1720 Ma deep seawater**
John F. Slack, Tor Grenne, and Andrey Bekker
Research Paper, Paleooceanography
- 315 Climate forcing by iron fertilization from repeated ignimbrite eruptions: The icehouse-silicic large igneous province (SLIP) hypothesis**
Steven M. Cather, Nelia W. Dunbar, Fred W. McDowell, William C. McIntosh, and Peter A. Scholle
Research Paper, Paleoclimatology
